## Siggins' Designs and Implements New Demdaco DC

Edgerton, KS (August 6, 2014) – Demdaco, a supplier of household gift and décor items, recently commissioned a new automated fulfillment center in Edgerton, KS. The 325,000 square foot distribution center is among the first to be located in the new BNSF Logistics Park Kansas City intermodal facility. Jeff Baker, DC Manager for Demdaco's new Edgerton location, indicated that the rail accessibility of the facility will contribute to saving significantly over their previous North Kansas City DC due to costs associated with the drayage of inbound sea containers.

Demdaco streamlined and modernized their new operation with the help of Siggins distribution center design and build firm ([www.siggins.com](http://www.siggins.com)). Demdaco's new multi-level picking module system has the flexibility to easily expand to a third level in the future. The packing and shipping sortation areas significantly reduce time and labor. Also employed in the new design are pick-to-

light modules, zone routing, and productivity tracking. Screens throughout the facility update the staff on zone productivity as well as other custom tactical data to ensure that Demdaco can address challenging instances before they become a large problem.

A time-lapse YouTube video of the Demdaco installation is available at the following link:
